

CANCOM TRACKING & TURNPIKE GLOBAL TECHNOLOGIES TO REMOVE ONE OF THE PROCESSES THAT BURDENS THE TRUCKING INDUSTRY WITH FUEL & MILEAGE TAX AUTOMATION

-- Cancom Tracking to offer TurnpikeDirect™ automated fuel & mileage tax management reporting system to its OmniTRACS® customers; meeting the demand for an automated solution that would help simplify the fuel & mileage tax reporting process--

Mississauga, Ontario and Stoney Creek, Ontario—July 24, 2002 –Cancom Tracking, a Shaw Communications Company (TSX: SJR.B and NYSE:SJR), the leader in mobile communications for the Canadian Transportation industry, has entered into an agreement with Turnpike Global Technologies of Stoney Creek, Ontario, to provide TurnpikeDirect automatic fuel & mileage tax reporting to TruckLoad, LTL and Private Fleet market sectors throughout Canada. TurnpikeDirect is an internet-based system that provides a framework to rapidly deploy applications that compliment Cancom's existing products and services. Turnpike's automated processing center combined with Cancom's satellite-based system, determines miles driven by state/province, by truck and by fleet. The TurnpikeDirect system combines the proven accuracy of OmniTRACS satellite positioning and the quality of Turnpike's routing database to determine accurate miles.

Turnpike's Fuel and Mileage Tax service eliminates the time and aggravation spent generating IFTA and State mileage tax reports by simply processing the data points provided by Cancom's OmniTRACS solution. Easy to use Internet applications compile, audit and store the data preparing it for reporting and inquiries. By automating both fuel and mileage collection the system provides all necessary reports in both kilometers and miles, which are accessed via a secure Internet site. The system has been extensively tested and benchmarked and is fully compliant with IFTA's provisions for electronic data recording systems. A major benefit to using Turnpike's software is that all quarterly rates and software upgrades are automatically added as they become available.

"We know that filing fuel & mileage tax reports is a labor-intensive and time-consuming process that is very costly to fleet owners," explained Colin Warkentin President of Turnpike Global Technologies. "We wanted to simplify the process by automating the collection and allocation of miles driven by state and province – integrating OmniTRACS with TurnpikeDirect does just that."

According to Mike Ham, Vice President of Cancom Tracking, "Our mission is to deliver integrated wireless data solutions that will forge competitive advantages for our customers. Turnpike's integration to OmniTRACS will provide users the ability to remove the inefficiencies associated with filing fuel & mileage tax reports. We will continue to build strategic relationships, broaden our direction and add value to customer's investment in technology."

About Shaw Communications Inc.

Shaw Communications Inc. is a diversified Canadian communications company whose core business is providing broadband cable television, Internet and satellite services to approximately 2.9 million customers.
